SCANENGINE VAPT PLATFORM

Apphaz ScanEngine provides both a perfect blend of automated scanning and penetration testing into a single pane with vulnerability management.

Perform VAPT at Scale

Customers can quickly initiate their assessments, keep track of their vulnerabilities and take faster actions on remediation of vulnerabilities from our Apphaz SE platform.

HOW IT WORKS

SIMPLIFY YOUR EFFORTS USING SCANENGINE

Vulnerability Management

Manages the lifecycle of vulnerabilities from identification till remediation which helps organizations with faster remediation timeframes.

Automated Scanning

Perform intelligent automated scanning on your infrastructure and applications seamlessly.

Asset Management

ScanEngine automates vulnerability scans of your assets to provide an in-depth view of vulnerabilities with guided remediation.

Prioritization

Populates vulnerabilities with severity which helps you prioritize what's important to you.

Orchestration

Assign vulnerabilities, track vulnerability remediation, and verify compliance across your entire organization.

Integrations

Seamless integrations with Jira (bi-directional) and slack for extended vulnerability management.

APHAZ DIFFERENTIATORS

	Apphaz PTaaS	Traditional
User Onboarding	 (onboard infinite number of client users)	
Assets (IPs, web URLs, mobile apps, etc)		
Integrations	 Jira  slack	
Continuous Automated Scanning (Network & Applications)	 nessus Professional  BURPSUITE	
Real-time Communication (live vuln reporting, project admin)		
Vulnerability deduplication		
Vulnerability Assignments		
Pentest Project Management		
Dedicated Pentest Manager		
Dedicated Pentesters		
Manual Penetration Testing		
Platform Access for 12 months		
PDF/Word Reports
